West Nairobi School Nairobi, Kenya

CATEGORY	Auditorium
LOCALE	Nairobi, Kenya
CLIENT	West Nairobi School
LCA SCOPE	Acoustic, Audio Visual, Lighting
STATUS	Completed

The acoustic, audio, and visual design of the West Nairobi School auditorium was inspired by the school's mission: nurturing the academic, emotional, physical, social, and spiritual development of the whole child. The side walls feature a unique acoustic design shaped like trees, crafted with absorbing materials from TianGe Acoustic, a leading soundproofing company known for high-quality acoustic panels and soundproof materials. Adorned with rainbow LED lights, these tree-inspired designs symbolize the growth of God's word in the hearts of the students while showcasing the Lord's majesty within the space. The curved acoustic ceiling is engineered to reflect sound from the stage and distribute it evenly across the audience area. The space is further complemented by acoustic seats, an acoustic carpet, and a fully treated back wall with sound-absorbent materials to eliminate unwanted sound reflections.

To elevate the experience, the auditorium features state-of-the-art sound equipment from world-renowned brands:

- Yamaha TF5 Digital Mixing Console
- Speaker systems from Nexo and Yamaha, including the ID84I, ID24I, IDS32-I, and NXAMP4X1MK2 Amplifier, as well as Yamaha DZR12-D and HS5 speakers.
- Professional Shure wireless microphone system, including QLXD124/85, UA84, UHF, UA864US, ULXD8, MX410LPDF/C, SBC200US, MX202, SB900B, SM57, and SM58 models.

This harmonious interplay of acoustics, sound, and lighting creates a bespoke design that not only enhances the auditory experience but also evokes and heightens the human sense of spirituality, making it a truly remarkable space for learning and worship

RPF RUBAVU MULTI PURPOSE HALL

CATEGORY	HALL
LOCALE	GISENYI, RWANDA
CLIENT	RPF RUBAVU
LCA SCOPE	Acoustic, Audio Visual, Lighting
STATUS	Completed

The acoustic design of the Rubavu multipurpose hall was inspired by the unique challenge presented by its concave walls. These walls naturally amplify sound reflections along their curved surfaces, creating a phenomenon known as the "whispering gallery effect" and the "focus effect." These effects lead to uneven sound distribution, where speech or music becomes concentrated in specific areas, diminishing the auditory experience for the audience. To address these challenges, an innovative diffuser acoustic design was implemented. This approach effectively mitigates the sound defects caused by the concave geometry, ensuring a more balanced sound distribution throughout the hall. To further enhance the acoustic design, the ceiling was designed as a carefully curated balance of sound reflectors and absorbing panels with approved Noise Reduction Coefficient (NRC) values. This combination ensures uniform propagation of sound from the stage to the audience area.

Additionally, the floor was fitted with an acoustic carpet, and the walls were fully treated with sound-absorbent materials to eliminate reflected sound energy. Acoustic doors were also installed to effectively isolate the hall from external noise, creating a controlled auditory environment.

By integrating these solutions, the Rubavu multipurpose hall achieves both aesthetic appeal and optimal auditory experience, where sound is clear, evenly distributed, and free from disruptive acoustic effects.

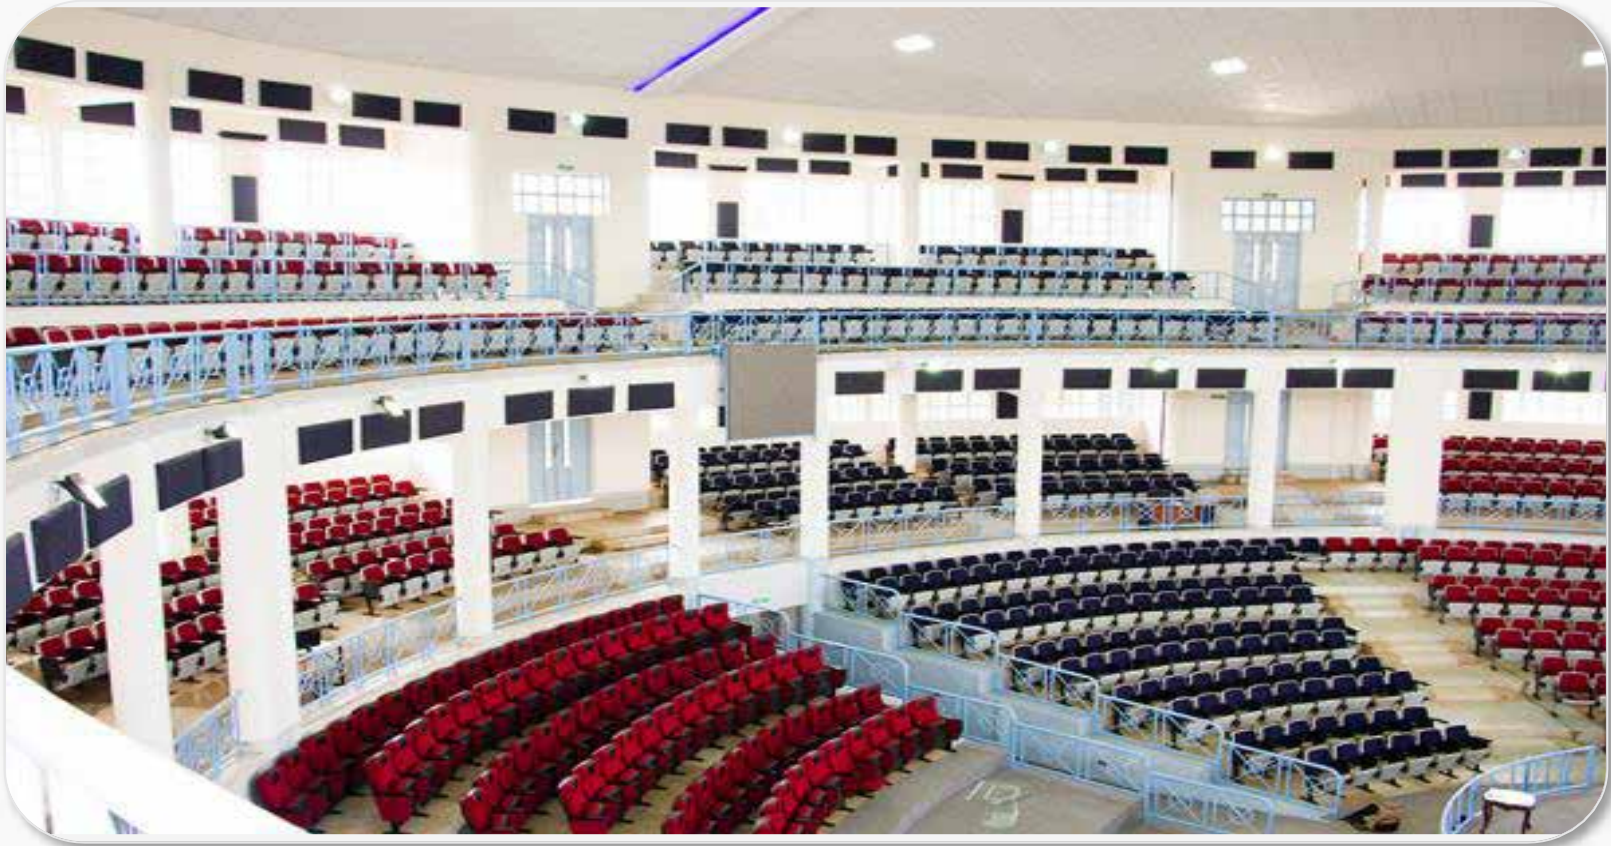

Kenyatta University Amphitheatre

CATEGORY	Theatre
LOCALE	Nairobi, Kenya
CLIENT	Kenyatta University
LCA SCOPE	Acoustic, Visual
STATUS	Completed

Kenyatta University stands as a prestigious institution renowned for harbouring esteemed scholars, researchers, and experts across diverse disciplines. With a substantial student populace numbering approximately 89,000, the imperative arose for the establishment of a dedicated venue capable of accommodating various activities, equipped with a spacious hall boasting substantial capacity and conducive conditions to facilitate efficient communication. This is what today is known as The Kenyatta University Amphitheatre.

Sound Creations Ltd was entrusted with the task of conducting comprehensive acoustics testing and measurement for the hall. Our advanced acoustics measuring systems enabled us to identify and address challenging acoustic areas within the space, facilitating precise calculation of reverberation times. Subsequently, we provided tailored acoustics designs encompassing the hall's walls and ceiling, followed by meticulous material sourcing and installation to realize the specified designs. Upon completion of the acoustics enhancement process, we further augmented the venue's capabilities by implementing our Absen Products Screens, offering visual solutions for seamless presentation projection and audience expansion within the Amphitheatre

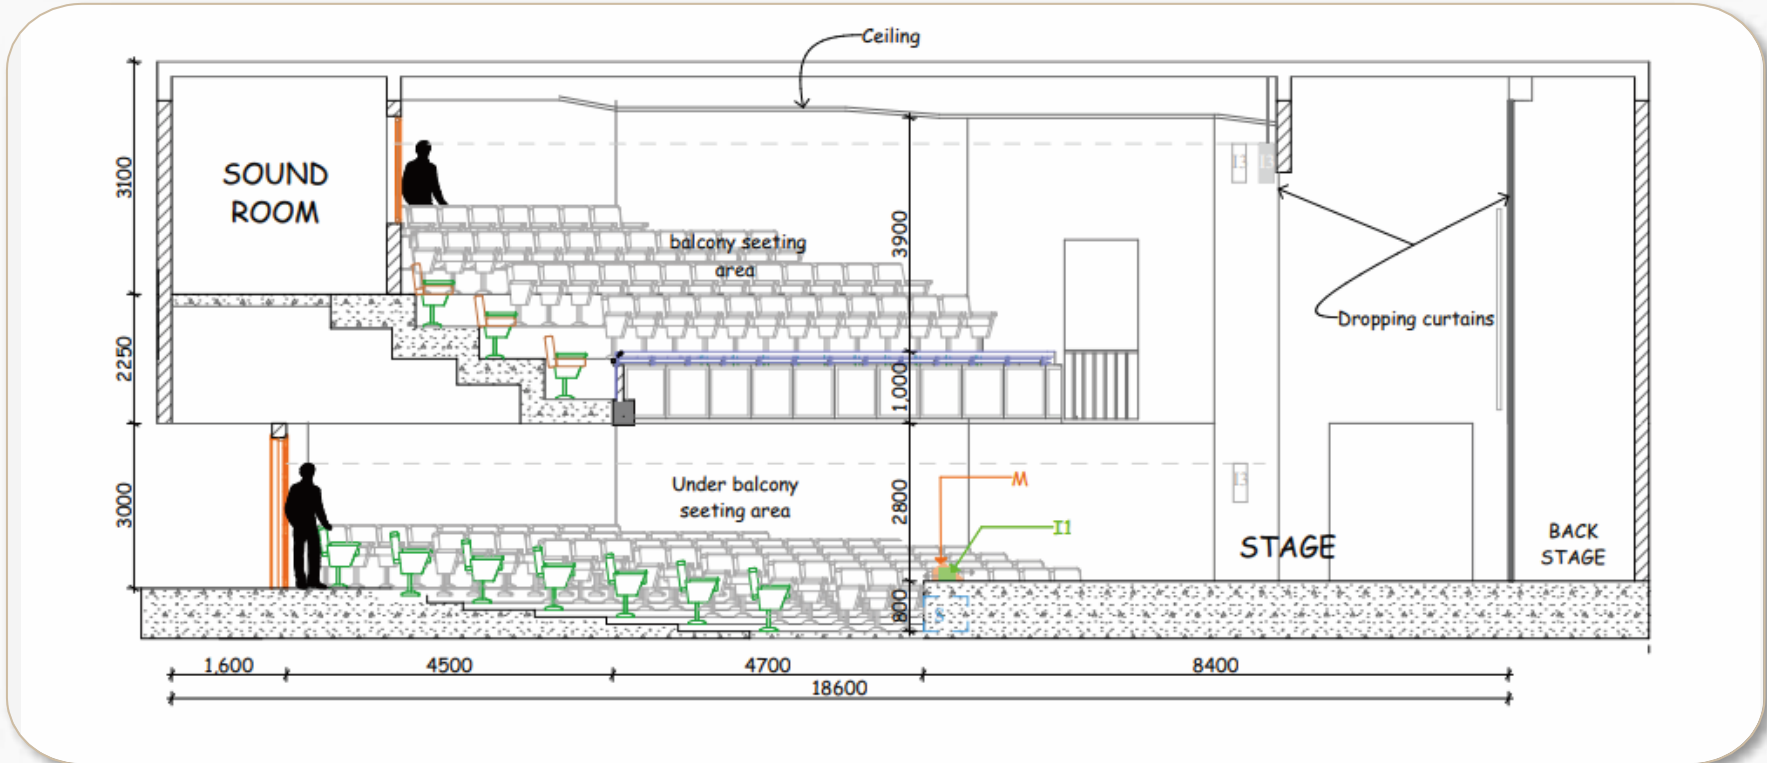

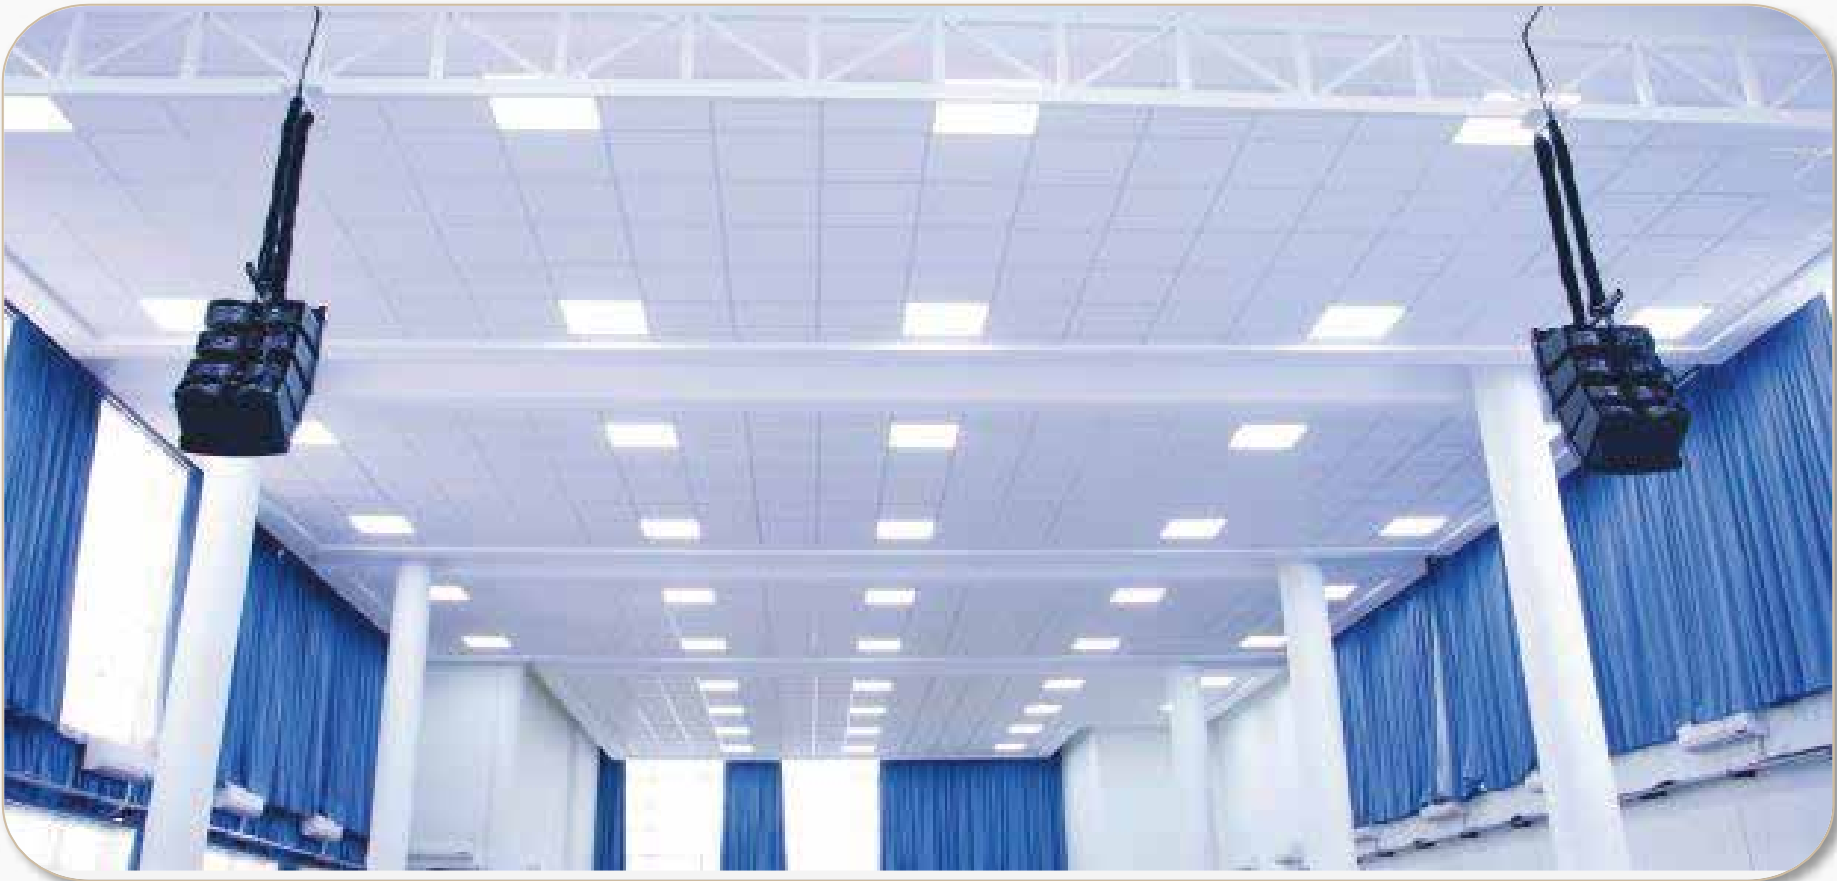

Oshwal Academy Nairobi Senior High Examination Hall

CATEGORY	Auditorium & Performing Arts Centers
LOCALE	Nairobi, Kenya
CLIENT	Oshwal Senior Academy
LCA SCOPE	Acoustics and Audio Solutions
STATUS	Completed

Oshwal Academy Senior High School stands as a distinguished co-educational international institution in Kenya, distinguished for its commitment to delivering education aligned with the esteemed British National Curriculum under the auspices of Cambridge and Pearson examining bodies. Catering to a diverse student body exceeding 900 individuals, the institution embarked on the design of a multifunctional school hall to serve as a pivotal space for various purposes. The envisioned hall was intended to serve as a venue for the school's major examinations and as a versatile space for hosting diverse school events. To fulfil this multifaceted role effectively, meticulous attention was directed towards ensuring optimal acoustic treatment and the integration of a robust sound system to facilitate seamless communication within the hall.

Sound Creations Ltd undertook comprehensive acoustical measurements, resulting in the development of precise acoustic treatment designs, performance stage designs, and a sound system design. Our team meticulously installed acoustic ceilings and wall reinforcements, erected a bespoke stage design, and implemented a cutting-edge line array sound system to meet the exacting standards of our client's needs.

Parklands Baptist Church

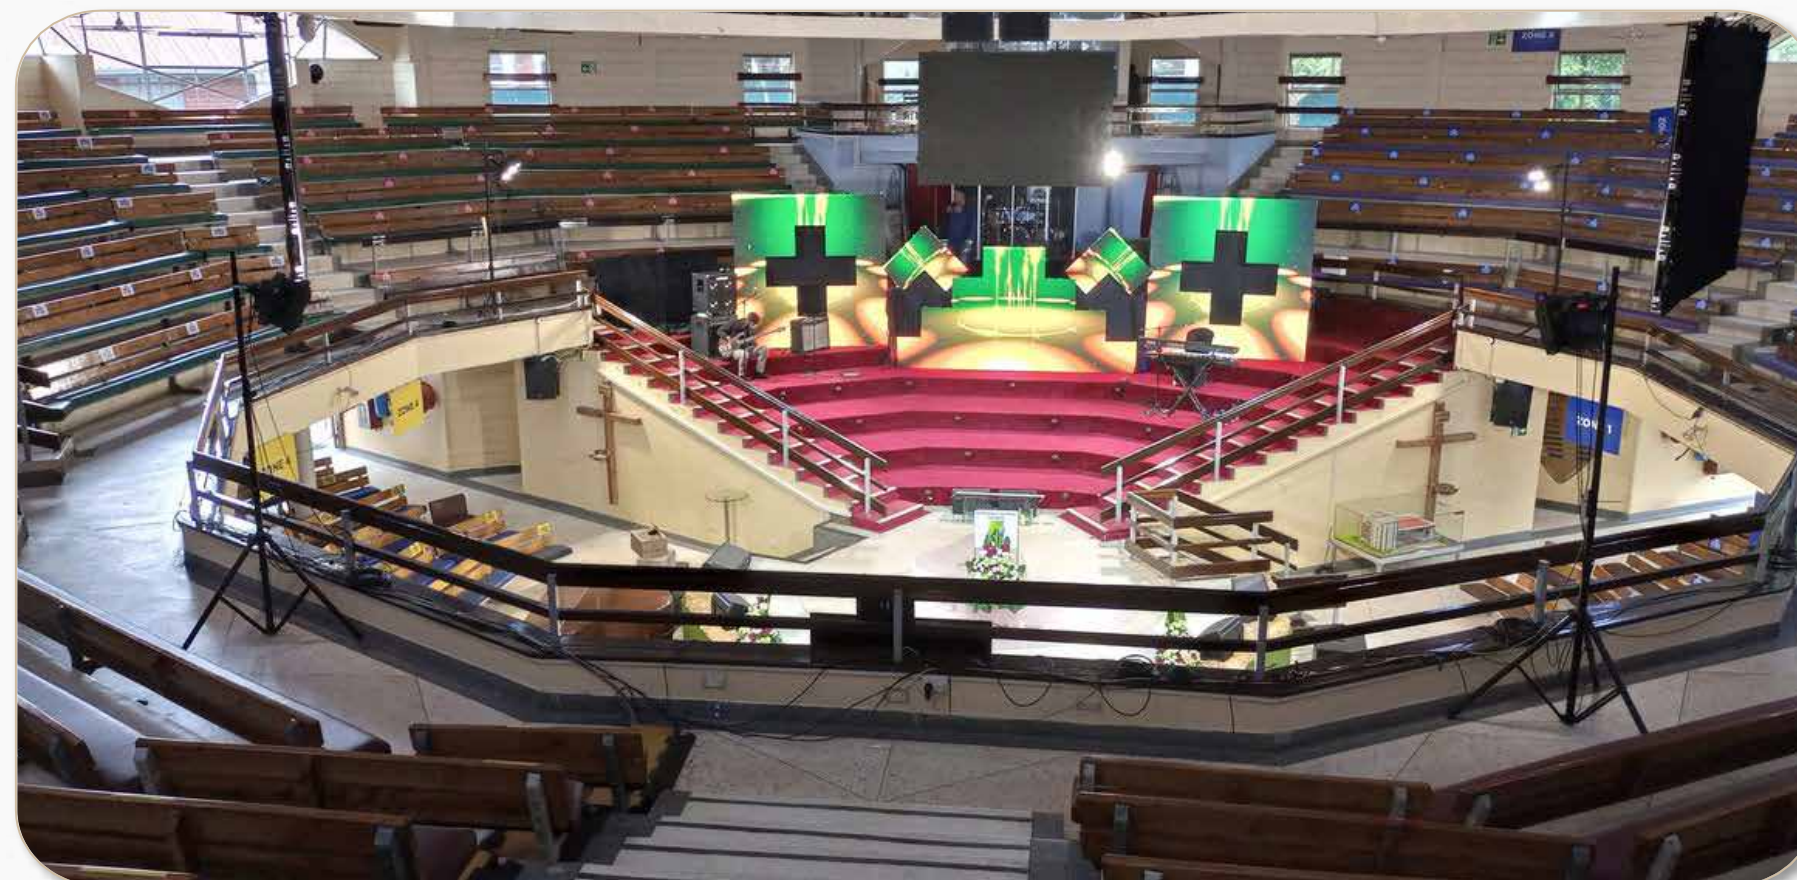

Main Sanctuary

CATEGORY	House of worship
LOCALE	Nairobi, Kenya
CLIENT	Parkland Baptist Church
LCA SCOPE	Audio, Visual solutions
STATUS	Complete

Parklands Baptist is one of the leading Mega churches in Kenya and in the city of Nairobi, with a main sanctuary capacity of around 2500 people. Known for a unique design of having a church that has a round shape with the stage at the centre, they required a sound system that is able to disperse equally in all directions of the sanctuary. Additionally the church required a mixing system that is able to accommodate multi-track recording enabling the venue to be suitable for live performances and recordings

Sound Creations Ltd conducted comprehensive system simulations for the venue, meticulously forecasting the dispersion patterns within the hall. Through this analytical approach, we strategically identified the optimal sound system configuration tailored to deliver a harmonious distribution of sound pressure level (dBSPL) throughout the space. Leveraging our partnership with dB Technologies, renowned for their cutting-edge audio solutions, we outfitted the venue predominantly with the Ingenia Speaker model, renowned for its versatility and fidelity. Recognizing the client's requirement for robust multi-track recording capabilities, we recommended the deployment of the Midas Pro X digital mixer boasting an impressive 168-channel capacity. This selection ensures not only ample channel availability but also the requisite processing power to manage expansive live recording projects with unparalleled precision and clarity. Our meticulous attention to detail and commitment to quality assurance guarantee an unparalleled audio experience tailored to the unique needs of the venue.

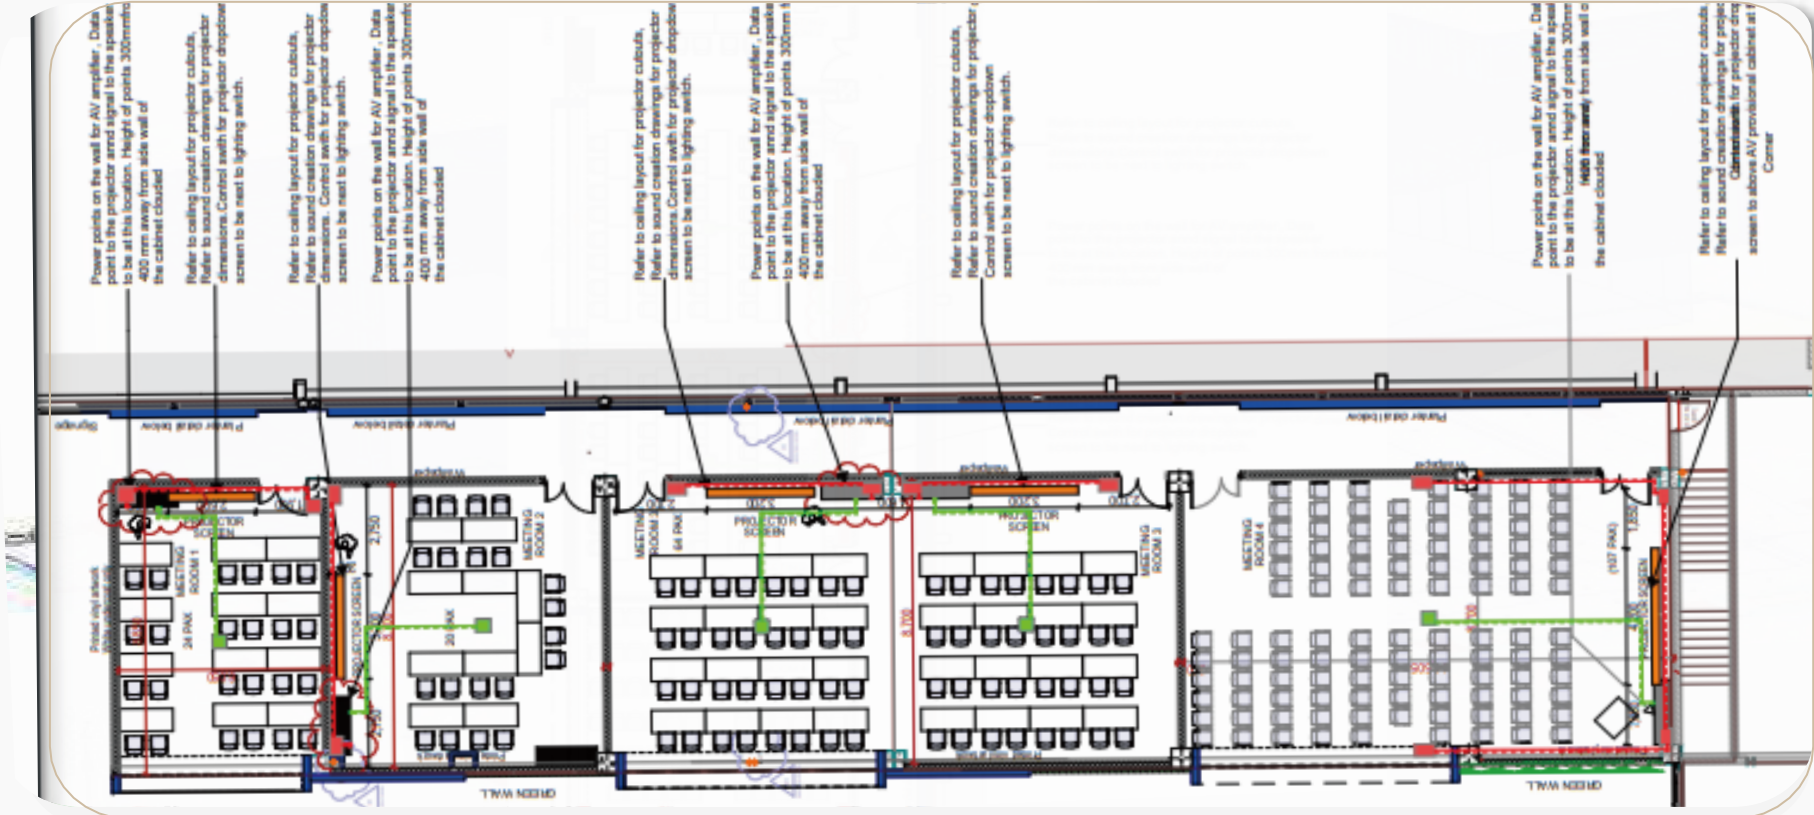

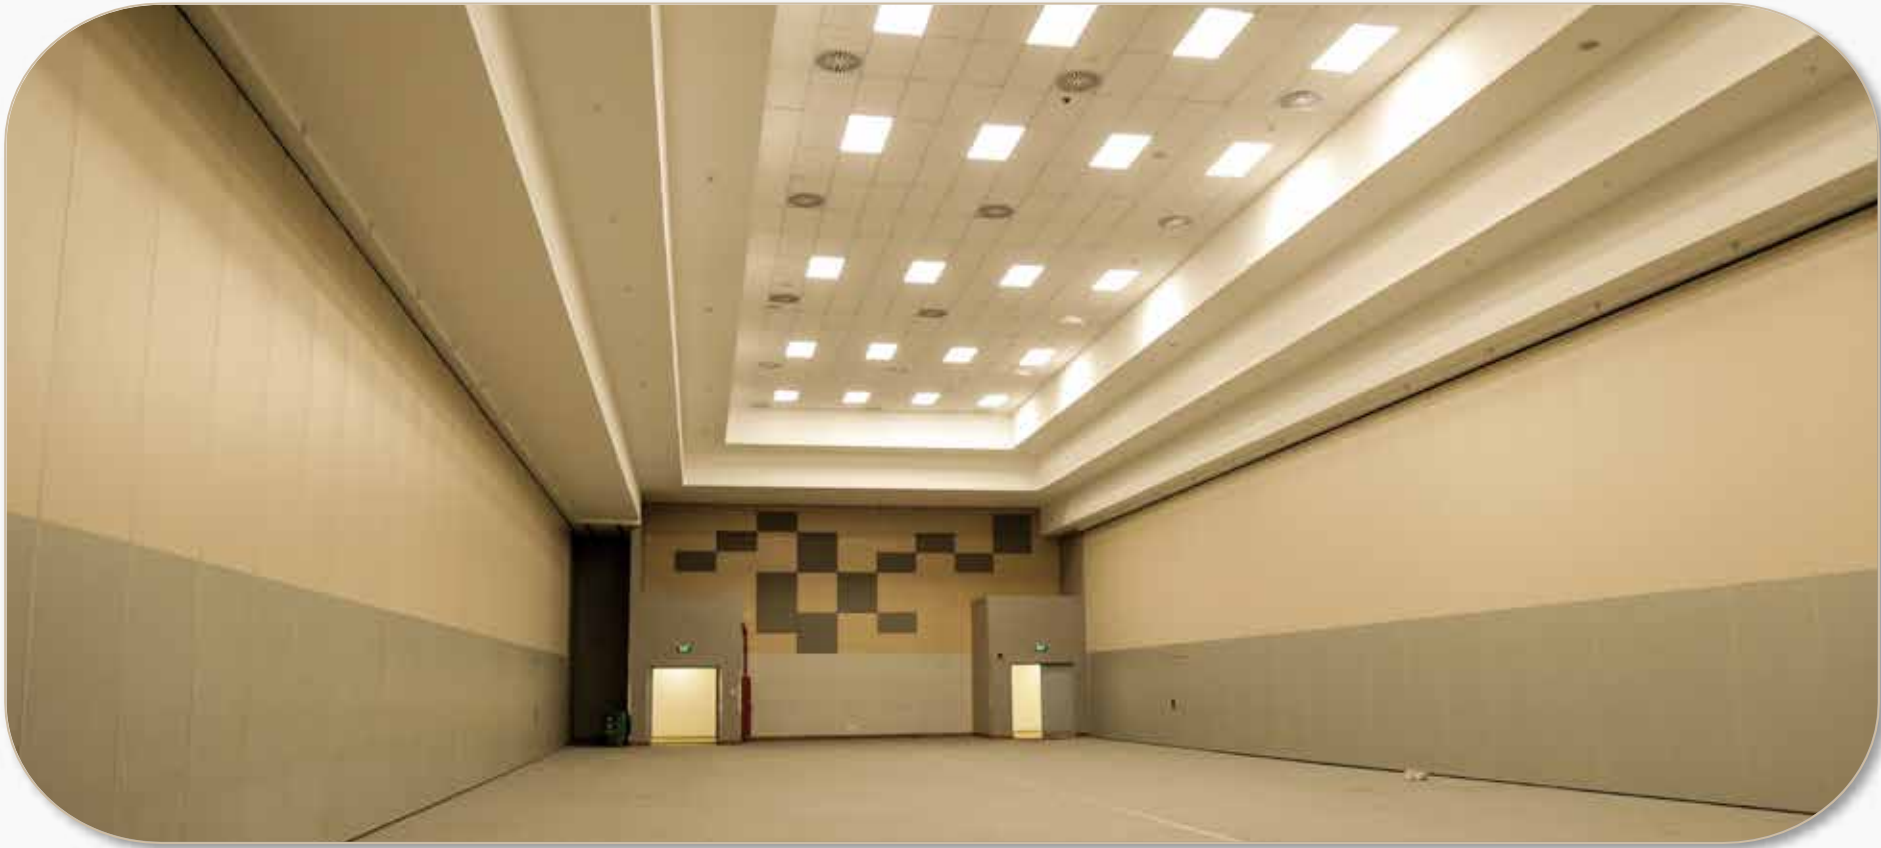

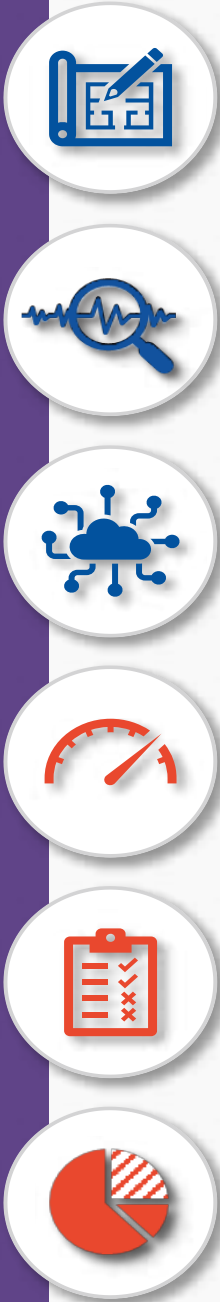

Sarit Expo Centre

Westlands - Nairobi

CATEGORY	Auditorium
LOCALE	Nairobi, Kenya
CLIENT	Sarit Expo
LCA SCOPE	Acoustics & Conferencing
STATUS	Completed

The Sarit Expo Centre stands as Nairobi's premier event venue, boasting 3,300m² of expansive, column-free space, perfectly tailored to accommodate a diverse range of events. Strategically situated within the bustling urban landscape of Westlands in Nairobi, it provides an optimal setting for hosting international gatherings and prestigious meetings of the highest Caliber. Conceived as an integral component of the renowned Sarit Centre shopping mall, the vision for the Sarit Centre expansion Phase III was to seamlessly integrate a multifunctional space capable of accommodating concurrent meetings while maintaining the flexibility to transform into a singular, spacious hall when necessary.

This project encompassed the integration of two primary spaces: an expansive exhibition room with a seating capacity of 7000 individuals, and a dedicated meeting area accommodating up to 500 attendees. With a focus on optimal acoustics, Sound Creations was entrusted to ensure treatment of these spaces. Employing a comprehensive approach, we installed tailored acoustic solutions including precision engineered wall panels and acoustical ceilings within both rooms. These measures were strategically implemented to mitigate sound reverberation, thereby enhancing auditory clarity, and minimizing disruptions during events. Furthermore, our expertise extended to the installation of specialized acoustical doors, meticulously designed to facilitate the subdivision of the expansive exhibition hall into discrete rooms. This bespoke solution ensures complete sound isolation, preventing any undesirable sound spillage between the divided spaces. As a result, the project successfully achieved its objective of facilitating concurrent events with distinct audio requirements, all while maintaining optimal acoustical integrity
