Kenyatta University Amphitheatre

CATEGORY	Theatre
LOCALE	Nairobi, Kenya
CLIENT	Kenyatta University
LCA SCOPE	Acoustic, Visual
STATUS	Completed

Kenyatta University stands as a prestigious institution renowned for harbouring esteemed scholars, researchers, and experts across diverse disciplines. With a substantial student populace numbering approximately 89,000, the imperative arose for the establishment of a dedicated venue capable of accommodating various activities, equipped with a spacious hall boasting substantial capacity and conducive conditions to facilitate efficient communication. This is what today is known as The Kenyatta University Amphitheatre.

Sound Creations Ltd was entrusted with the task of conducting comprehensive acoustics testing and measurement for the hall. Our advanced acoustics measuring systems enabled us to identify and address challenging acoustic areas within the space, facilitating precise calculation of reverberation times. Subsequently, we provided tailored acoustics designs encompassing the hall's walls and ceiling, followed by meticulous material sourcing and installation to realize the specified designs. Upon completion of the acoustics enhancement process, we further augmented the venue's capabilities by implementing our Absen Products Screens, offering visual solutions for seamless presentation projection and audience expansion within the Amphitheatre

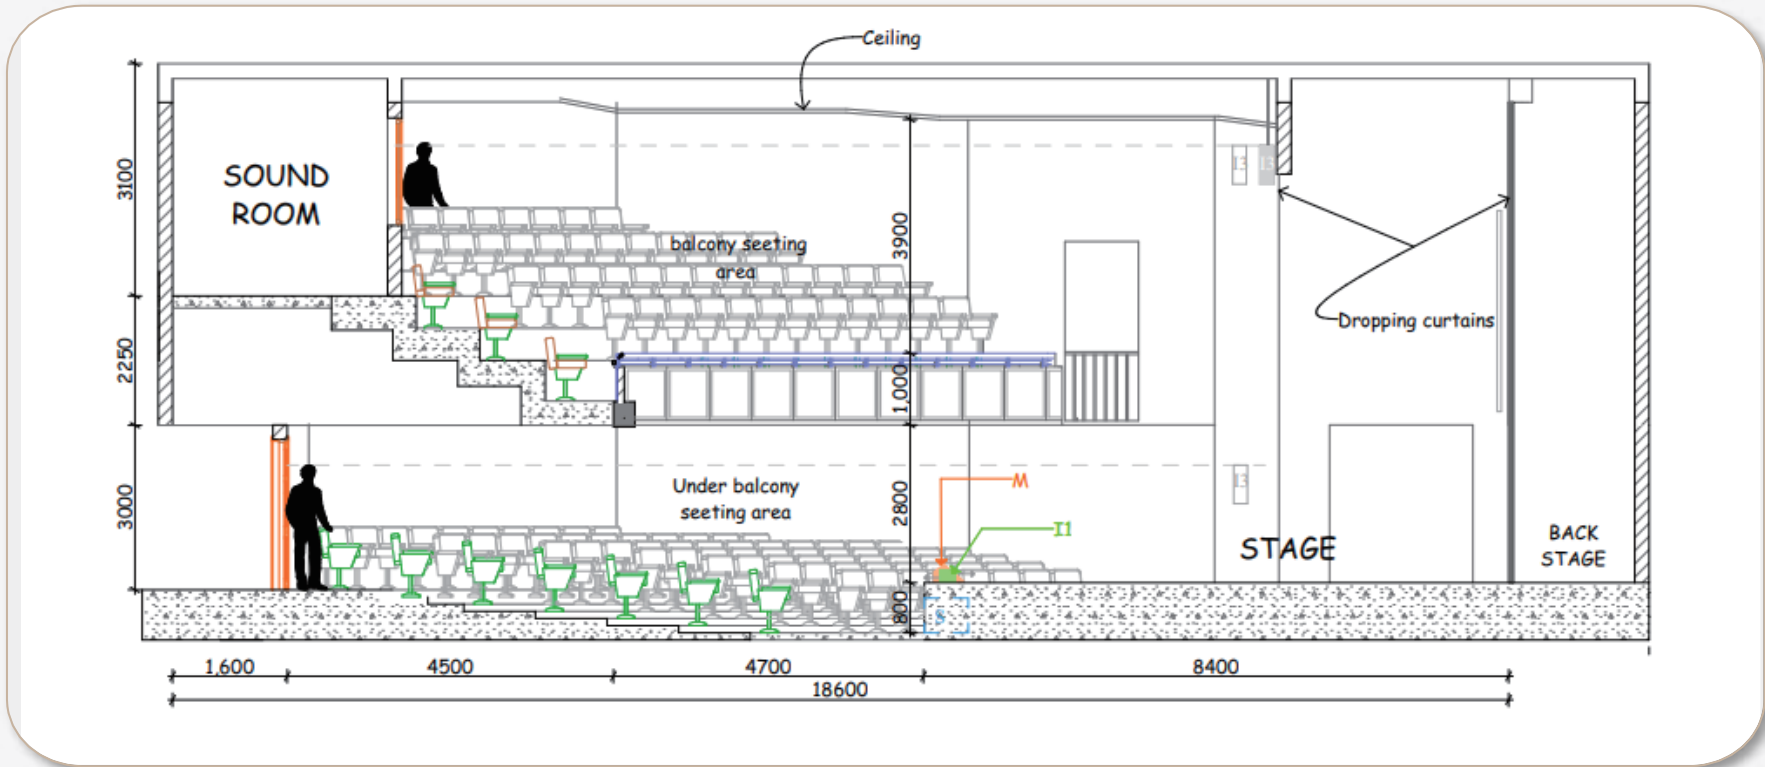

Oshwal Academy Nairobi Senior High Examination Hall

CATEGORY	Auditorium & Performing Arts Centers
LOCALE	Nairobi, Kenya
CLIENT	Oshwal Senior Academy
LCA SCOPE	Acoustics and Audio Solutions,
STATUS	Completed

Oshwal Academy Senior High School stands as a distinguished co-educational international institution in Kenya, distinguished for its commitment to delivering education aligned with the esteemed British National Curriculum under the auspices of Cambridge and Pearson examining bodies. Catering to a diverse student body exceeding 900 individuals, the institution embarked on the design of a multifunctional school hall to serve as a pivotal space for various purposes. The envisioned hall was intended to serve as a venue for the school's major examinations and as a versatile space for hosting diverse school events. To fulfil this multifaceted role effectively, meticulous attention was directed towards ensuring optimal acoustic treatment and the integration of a robust sound system to facilitate seamless communication within the hall

Sound Creations Ltd undertook comprehensive acoustical measurements, resulting in the development of precise acoustic treatment designs, performance stage designs, and a sound system design. Our team meticulously installed acoustic ceilings and wall reinforcements, erected a bespoke stage design, and implemented a cutting-edge line array sound system to meet the exacting standards of our client's needs.

Parklands Baptist Church

Main Sanctuary

CATEGORY	House of worship
LOCALE	Nairobi, Kenya
CLIENT	Parkland Baptist Church
LCA SCOPE	Audio, Visual solutions
STATUS	Complete

Parklands Baptist is one of the leading Mega churches in Kenya and in the city of Nairobi, with a main sanctuary capacity of around 2500 people. Known for a unique design of having a church that has a round shape with the stage at the centre, they required a sound system that is able to disperse equally in all directions of the sanctuary. Additionally the church required a mixing system that is able to accommodate multi-track recording enabling the venue to be suitable for live performances and recordings

Sound Creations Ltd conducted comprehensive system simulations for the venue, meticulously forecasting the dispersion patterns within the hall. Through this analytical approach, we strategically identified the optimal sound system configuration tailored to deliver a harmonious distribution of sound pressure level (dB SPL) throughout the space. Leveraging our partnership with dB Technologies, renowned for their cutting-edge audio solutions, we outfitted the venue predominantly with the Ingenia Speaker model, renowned for its versatility and fidelity. Recognizing the client's requirement for robust multi-track recording capabilities, we recommended the deployment of the Midas Pro X digital mixer boasting an impressive 168-channel capacity. This selection ensures not only ample channel availability but also the requisite processing power to manage expansive live recording projects with unparalleled precision and clarity. Our meticulous attention to detail and commitment to quality assurance guarantee an unparalleled audio experience tailored to the unique needs of the venue.

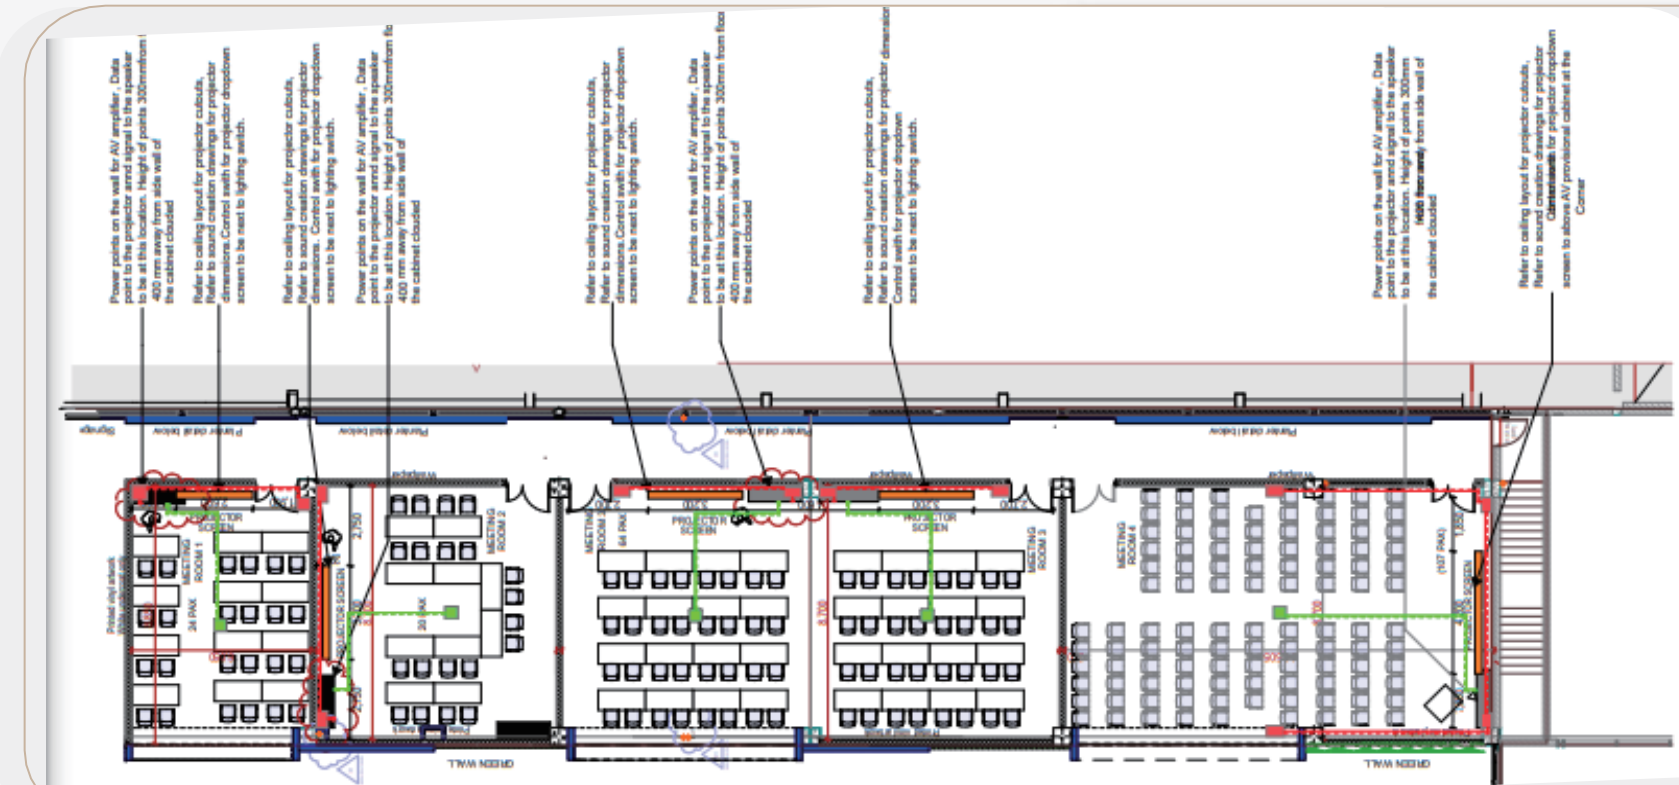

Sarit Expo Centre

Westlands - Nairobi

CATEGORY	Auditorium
LOCALE	Nairobi, Kenya
CLIENT	Sarit Expo
LCA SCOPE	Acoustics Solutions
STATUS	Completed

The Sarit Expo Centre stands as Nairobi's premier event venue, boasting 3,300m² of expansive, column-free space, perfectly tailored to accommodate a diverse range of events. Strategically situated within the bustling urban landscape of Westlands in Nairobi, it provides an optimal setting for hosting international gatherings and prestigious meetings of the highest Caliber. Conceived as an integral component of the renowned Sarit Centre shopping mall, the vision for the Sarit Centre expansion Phase III was to seamlessly integrate a multifunctional space capable of accommodating concurrent meetings while maintaining the flexibility to transform into a singular, spacious hall when necessary.

This project encompassed the integration of two primary spaces: an expansive exhibition room with a seating capacity of 7000 individuals, and a dedicated meeting area accommodating up to 500 attendees. With a focus on optimal acoustics, Sound Creations was entrusted to ensure treatment of these spaces. Employing a comprehensive approach, we installed tailored acoustic solutions including precision engineered wall panels and acoustical ceilings within both rooms. These measures were strategically implemented to mitigate sound reverberation, thereby enhancing auditory clarity, and minimizing disruptions during events. Furthermore, our expertise extended to the installation of specialized acoustical doors, meticulously designed to facilitate the subdivision of the expansive exhibition hall into discrete rooms. This bespoke solution ensures complete sound isolation, preventing any undesirable sound spillage between the divided spaces. As a result, the project successfully achieved its objective of facilitating concurrent events with distinct audio requirements, all while maintaining optimal acoustical integrity

Projects

Excerpt of projects where Team Sound Creations Ltd have been involved :

Recreational Facilities

Tumaini University (Tanzania) Multipurpose Auditorium

Project Details: Sound System and lighting installation and commissioning.

Lighting brand: Chauvet Professional

ACCES 2018
